

Sure, you can buy a bagger with a built in check weigher-OR, you can buy a proven bagger that doesn't spill product all over the floor-the Fox WB Series.

**FS WB
Bagger
The
proven
line of
automatic
wicket
bagger**

Works with Poly, Poly-Mesh Combo or Full Mesh Wicketed Bags

Available in right and left hand versions
Tubular bag holder with adjustable wicket pins
Allen Bradley electronics with color touchscreen
Built in USA
208-240VAC 1-Phase power requirement
1.5-20 LB bag weights
Full stainless steel construction
Works with Fox supplied NEWTEC weighers
or your own weigher

Bag closure via Kwik Lok 865
Out of loks detector to stop bagger
Jam sensor photo-eye
Remote control included
3 chute sizes available
Quick change overs with no side panels to adjust
Extremely small footprint
Easiest to clean bagger on the market
Multiple saveable menus for custom programs

Use the same bagger for product sizes from small key limes to huge grapefruit- Pack citrus, onions, potatoes, peppers, avocodos, garlic, sweet potatoes, nuts and bakery items all on the same machine!

Fox SOLUTIONS™

What sets the Fox WB series of baggers apart from the competition and makes them superior with less bag waste, underweight bags, missed bags and required adjustments as compared to any other wicketed bagger option?

The short answer is the most experienced group of wicketed bagger engineers anywhere and a commitment to keep the machines simple, user friendly and the most consistent performance of any wicketed bagger period.

Until the WB series of baggers was produced every other wicketed bagger ever made or still made was a compromise.

Some worked ok with small products, some with large products. Some could get you by running small weighments and some with larger weightment. Some worked ok on poly bags but struggled on mesh bags. Some could open a thin bag well and some could open a thick bag well-but none of them could perform all these actions equally well and required intense adjustments when bag sizes, bag weights and bag mil thicknesses changed. You don't want adjustments-you want performance.

Here's what we did to kick all those problems to the curb and build the most consistent running bagger with the least amount of adjustments necessary to run great bags or poor quality bags and allow you to designate basically anyone as an operator.

BAG PICK UP- Nothing picks up a bag like vacuum-nothing. Building a bagger with a blower to open bags or a weak gimmick like Vortex or something similar will result in huge problems attempting to open a bag. As bag sizes and thicknesses and materials change these systems require tremendous amounts of adjustment or attention and they don't perform. Fixed vacuum head bars or fixed suction cups suffer on narrow or large bags and offer no adjustments. We engineered a single suction cup that contacts the bag in the middle where it is the least resistant to open and it doesn't matter if we are ¼" down from the bag lip or 1 ½" we suction the bag open where every other bagger struggles mightily. The WB series is the most forgiving bagger made for questionable quality bags and has proven itself again and again to outperform all other baggers.

BAG FILLING- The only way to guarantee that all the weightment goes into the bag is to ensure there are no gaps or exposed bag edges. We are the only company that has solved this. We wrap the bag around a cylinder giving a round opening with no gaps and no exposed bag edges that the product can hit knocking the bag loose leading to underweight bags. We put the product in the bag not on the floor. We don't mandate that you need a check-weigher if you are running a NEWTEC weigher that we are glad to supply as they are deadly accurate and you certainly don't need one for the WB series of wicket baggers so buy something that you want with your saved money-not an item to add redundancy to a product that you expect to work.

FOOD SAFETY CONCERNS- The infeed chutes are removable without tools in a matter of seconds and can be put in a sink to be washed providing excellent access to the feed belt for quick cleaning. Experienced engineers know what is important.

PROVEN PERFORMANCE- Find out what many packers already know that this is the best bagger you can buy-guaranteed!
